Using Telemedicine to Integrate Behavioral Health Care
What is Telemedicine?
Telemedicine is the use of telecommunication and information technologies in order to provide behavioral health care at a distance. It helps eliminate distance barriers and can improve access to behavioral health services that would often not be consistently available in distant rural communities.

MDwise works collaboratively to improve access with the telemedicine distance site and originating site. Our team is able to assist with forming a relationship with a distance site or with identifying a originating site by determining locations where there is a need for service.

What is the Goal of Telemedicine?
• To open access for behavioral health services due to a shortage of psychiatrists.
• To improve behavioral health medication adherence and member adherence to appointments.
• To increase access to behavioral health services for adults who require the services of a psychiatrist.
• To improve behavioral health conditions and prevent inpatient admissions due to unmanaged conditions.
• To reduce the need for transportation services by bringing behavioral health service to the patient.

DEFINITIONS
Distance Site: Location of the provider rendering healthcare services.
Originating Site: Location where the patient is physically located when services are provided through telemedicine.
How Does it Work?
The behavioral health provider can meet with a member via teleconferencing when mental health services are needed. The telemedicine provider is in a remote location and uses video conferencing to meet with a member in a private, office setting. The provider may be a mental health therapist, certified nurse specialist/APRN, or psychiatrist. The service must be medically necessary for the professional to meet with the member via teleconferencing.

Using telemedicine services is a good way to help members have access to services not available otherwise. It is an effective and efficient use of resources that allows providers to bridge gaps in treatment services across the state. Bridging the gap between an inpatient hospitalization and the need for an outpatient appointment within 7 days is one way telemedicine can help members.

As of October 1, 2017, the IHCP eliminated the requirement that telemedicine services are covered only when the distant site (the location of the provider rendering services) and the originating site (the physical location of the patient) are greater than 20 miles apart. The distance requirement is eliminated for all provider types eligible to render telemedicine services. (See IC 12-15-5-11. See IHCP Bulletin 201807.)

Both the distant and originating site are eligible for reimbursement when the services rendered meet the definition of valid encounter and are consistent with the IHCP telemedicine policy. (See IHCP Banner Page BR201409.)

Covered Services

- Consultation.
- Office or other outpatient visits.
- Individual psychotherapy.
- Psychiatric diagnostic interview.

Non-Covered Services

- Home health agencies or services.
- Laboratory services.
- Long-term care facilities.
- Anesthesia services or nurse anesthetist services.
- Services billed by school corporations.
